Dear Friends,

I am happy to present the Annual Report of our activities for the year 2024-25. We are all known that our organization has been working for the development of the needy and disadvantaged people of Sundarbans since 2005. We are striving to provide opportunities for health, education, and environment protection, agricultural development, eradication of hunger and socio-economic development of the poor and downtrodden people with particular emphasis on differentially vulnerable groups like women, girls, children, and senior citizens; persons with disability, the rural poor and the berated youths.

Our organization has worked with multiple stakeholders: Local bodies, Governmental bodies, grass root label designated persons, national NGOs, private sector, and multilateral organizations to create a platform and an understanding among each other. Shibganj Integrated Development Society (SIDS) enters into its 20 years with a remarkable confidence. We have successfully implemented 9 projects in 2024-25. These projects are: Livelihood programs in rural areas through indigenous goat rearing, Reducing gender inequality in coastal areas of Sundarbans through community mobilization, Awareness programs for conservation of biological diversity and sustainable development, Planting fruit trees to eliminate malnutrition, Nutrition training for rural women to eliminate malnutrition in Sundarbans, Distribution of winter blankets and dry ration to the elderly people of Sundarbans, Food security program and sustainable agricultural development, Community Health Development and Development of Primary education for coastal children. Development of Primary education is a running program of our organization. The school was established in 2018. Enthusiasm has been shown among staff, volunteers, and members in implementing the projects. It is very unfortunate that despite submitting projects to many Donor Partners, no grants were received.

It will be memorable for us that we received our first foreign fund this year. We have also received small grant from Give Foundation and the Give Foundation has awarded two certificates to our organization for wonderful fundraising efforts in the "**India Philanthropy Day**" and for wonderful fundraising efforts and for winning in "**100 heroes'24**". We have some good news that the Global Alliance of NGOs for Road Safety and the Catalyst 2030, Netherlands has granted our organization membership recognition. We have also received membership recognition from Bharat Economic Forum and Grassroots Justice Network.

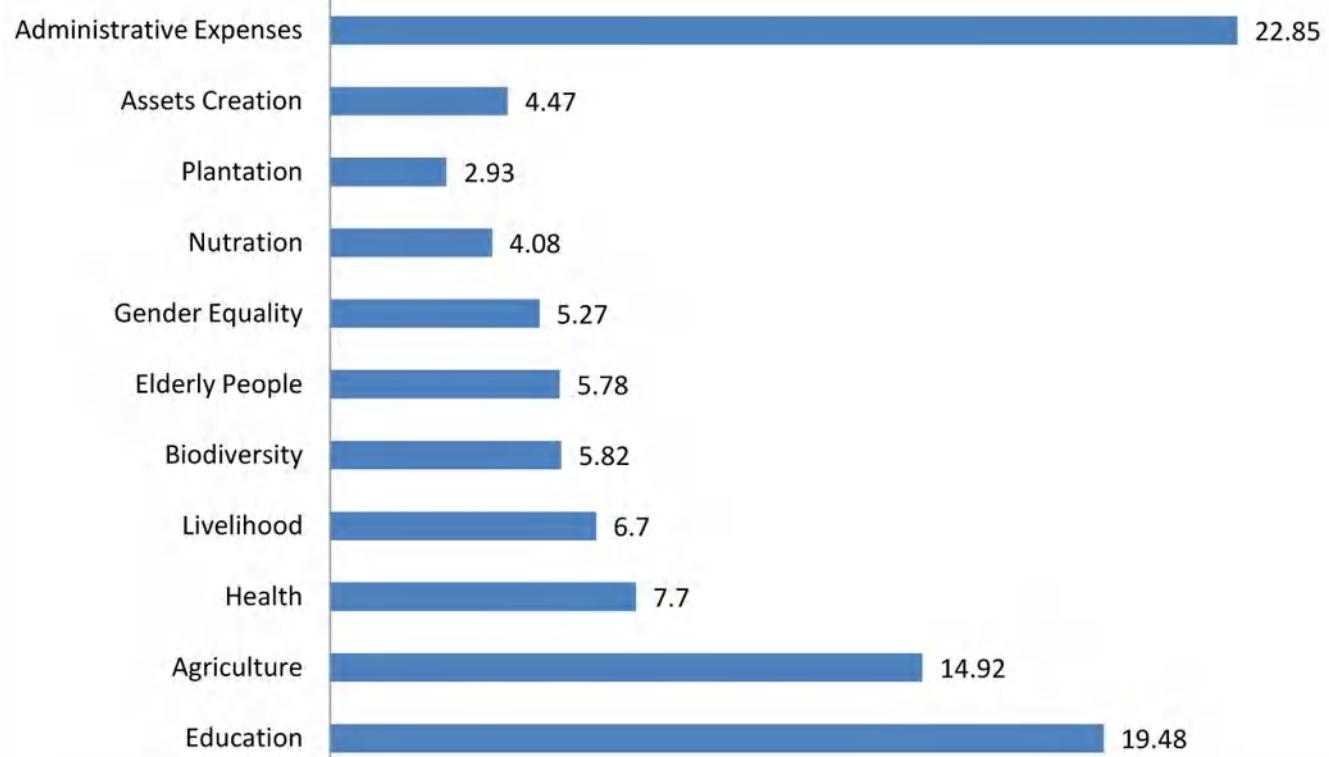

I would like to thank all of our supporters, donors, partners, staff and volunteers for their contributions in transforming a society. We also convey thanks to the rural people who cooperated us in implementation the projects in their areas. I am very pleased to know that all members, staff, and volunteers are adhering to the policies we have developed to ensure the smooth running of our organization. Everyone is requested to become more involved in the functioning of SIDS in the future. Thanks.

Date: 17/09/2025

Congratulations **SHIBGANJ INTEGRATED DEVELOPMENT SOCIETY**

for your wonderful fundraising efforts and for winning in
100 Heroes'24
Give.do congratulates the team for this resounding success.

Atul Satija
 Founder 2.0 & CEO, Give

Establishment of Pre-Primary and Primary school for children of the coastal areas and maintaining continuity of education:

Primary education is crucial for poor children in the Sundarbans to break the cycle of poverty and improve their future prospects. The region faces unique challenges like natural disasters, poverty, and lack of infrastructure, which hinder access to quality education and lead to high dropout rates. Education empowers these children with knowledge and skills, enabling them to pursue better livelihoods and contribute to their community's development. The Sundarbans is a cluster of islands making it difficult for children to access schools and educational resources. Providing education within the Sundarbans through initiatives like model schools or learning centres, is essential.

We have been running a Pre-Primary school since 2018. Later the primary section was added. We all know that Primary education is the first step of formal education. The organization does not collect any fees from the children. The organization provides the dress, books and educational materials to the children free of cost. It also bears all expenses, including teacher salaries and furniture. The objectives that we hope to achieve through primary education are:

- Primary education provides the basic literacy and numeracy skills necessary for further learning and participation in society.
- Education empowers individuals with the knowledge and skills to improve their living conditions and livelihoods.
- By fostering a sense of responsibility and awareness, education can encourage communities to actively participate in the conservation of the Sundarbans.
- Education can also address issues related to health and hygiene, promoting better living conditions and overall well-being.
- It can teach children about the importance of mangroves, biodiversity, and sustainable resource management.

Students in a class room

Livelihood programs in rural areas through indigenous goat rearing:

Grazing goats by a beneficiary in the field

Indigenous goat rearing is highly important in the Sundarbans for providing a sustainable livelihood for many, particularly women and landless populations. These goats, like the Black Bengal breed, are well-adapted to the local environment, offering meat and milk, and contributing to food security and economic empowerment. Goat meat is highly popular and in demand both locally and in urban markets. Indigenous goats, particularly the Black Bengal, can provide a good amount of milk, supplementing household nutrition and potentially generating income.

Goats can reproduce quickly, and within a

few months, farmers can start getting milk and offspring for sale. The prime objectives of the project are:

- Goat rearing provided women with an independent income source, increased their economic independence and decision making power.
- Indigenous goats are well-adapted to the specific climate conditions of the Sundarbans, including saline-prone areas.

Grazing goats by a beneficiary in the field

Goat contribute food security by providing a reliable source of protein (Meat and milk)

The organization supplied 3 goats to each mother and 8 beneficiaries were selected in Kamdev Nagar village. Rearing rooms were constructed by the organization and fodder and medicine were distributed for six months. 2 days training program was organized for the beneficiaries. Veterinary doctor visited the house of each beneficiary and check up all goats 3 times. Staffs are engaged to follow up the program.

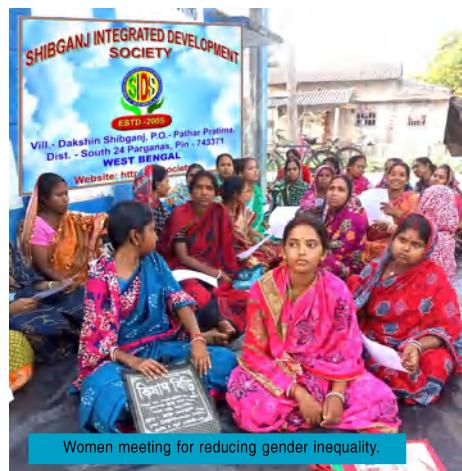

Reducing gender inequality in coastal areas of Sundarbans through community mobilization:

Reducing gender inequality in the Sundarbans is crucial for both social justice and sustainable development. Addressing the inequalities faced by women in this region can enhance their livelihoods, improve community resilience to climate change, and contribute to the overall well-being of the Sundarbans. Reducing gender inequality ensures women have equal access to education, healthcare, economic opportunities, and decision making processes, promoting their fundamental human rights. It helps in combating gender based violence, discrimination, and harmful traditional practices that disproportionately affect women.

In conclusion, reducing gender inequality in the Sundarbans is not just a matter of social justice

Awareness Camp for reducing gender inequality.

Women meeting for reducing gender inequality.

but also a pragmatic approach to achieving sustainable development, environmental conservation, and community well-being. We believe that creating awareness among the general public is the best way to eliminate gender inequality. So our organization implemented during this year several awareness programs like seminar, awareness camps, street plays, and wall writings. Street plays can effectively address gender equality by raising awareness and challenging harmful norms through engaging performances.

Wall writings are a good way to disseminate information in local languages. Seminars and camps on gender inequality can raise awareness by educating participants about gender-related issues, challenging harmful stereotypes, and promoting a more inclusive and equitable environment.

Awareness programs for conservation of biological diversity and sustainable development:

Seminars can effectively raise awareness about biodiversity conservation by providing a platform for experts to share knowledge, engaging participants through interactive discussions, and promoting a deeper understanding of the importance of biodiversity and its conservation. Seminars can feature presentations and talks by experts in biodiversity conservation, sharing the latest research, conservation strategies, and the importance of biodiversity for ecosystems and human well-being. Wall writing, also known as street art, can be a powerful tool for raising awareness about biodiversity conservation by visually communicating its importance and inspiring action. By combining engaging visuals, emotional storytelling, and informative content, videos can effectively

create awareness about biodiversity conservation and inspire viewers to become active participants in protecting our planet's rich biodiversity.

Our organization has implemented the seminar, wall writing and VIDEO showing programs with the aim of creating awareness among the public about conserving the Sundarbans ecosystem. Since the organization is located within the Sundarbans, we have prioritized biodiversity conservation. The organization collected some money from community contribution. The project was implemented with the remaining funds from the organization.

Read Show by SIDS to conserve the biodiversity.

Planting fruit trees to eliminate malnutrition:

Fruit plantation at households in the Sundarbans offers a multitude of benefits, from enhancing food security

and nutrition to promoting economic empowerment and environmental sustainability, making it a valuable practice for the region. Fruits are excellent sources of vitamins, minerals, and fiber, contributing to a balanced and healthy diet, which is especially important in areas where access to diverse food sources is limited. Fruit cultivation offers a viable alternative to traditional livelihoods, particularly in areas where agriculture is challenged by salinity and other environmental factors.

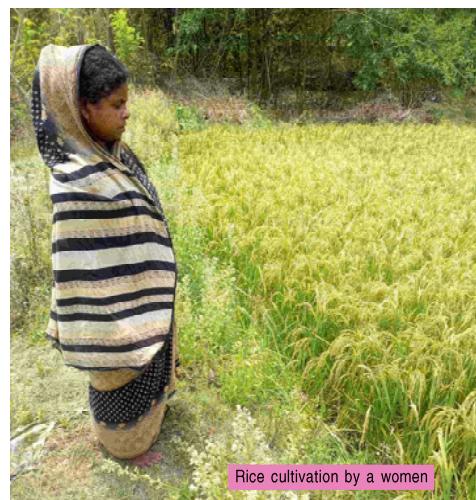

Our organization distributed 150 fruit seedlings among 25 poor women led families in Rakhalpur and Sridharnagar villages. Fertilizer was distributed among the women beneficiaries for fruit plants Care and growth. Each family planted the seedlings on their

own initiative. 25 women were trained in tree care. A staff member from the organization followed up on this project for a year. We know that home gardens with fruit trees can provide a steady supply of fresh fruits, reducing dependence on markets and potentially lowering food costs for households. Fruit trees into agricultural systems can improve soil fertility, and structure, contributing to sustainable agricultural practices. Fruit trees can be more resilient to climate change impacts than some other crops.

Food security program and sustainable farming practice:

Every year SIDS starts agricultural development programs by adding new areas. Among the objectives of the organization,

agricultural development has been given priority. Agriculture is vital for the inhabitants of Sundarbans, providing a primary source of livelihood and food security. It's the mainstay of economic life for the rural population, with a large percentage relying on it directly or indirectly through related activities like animal husbandry. Agriculture, particularly rice cultivation, is the primary source of income and sustenance for a large portion of the Sundarbans population. While agriculture is central, other activities like animal husbandry and fishing play significant roles in the local economy. The Sundarbans environment is susceptible to climate change impacts, including

rising sea levels, salinity intrusion, and cyclones. Therefore, developing climate resilient cropping strategies and land management techniques is crucial for the region's agricultural future. Modern land reshaping techniques and diversified agriculture systems are needed to enhance productivity and resilience.

For development of sustainable agriculture practices, the organization adopted a few strategies which are: Farmers trainings, supply of seeds and fertilizer, supply of agricultural tools, re-excavation of ponds, and supply of fingerlings. The poor women, widows, handicapped persons, and minority

groups are the beneficiaries of this project. The project will not only solve the food problem but also provide employment. Dependence on agriculture will increase among generations,

"TO BE A FARMER IS TO BE A STUDENT FOREVER, FOR EACH DAY BRINGS SOMETHING NEW"

—John Connel

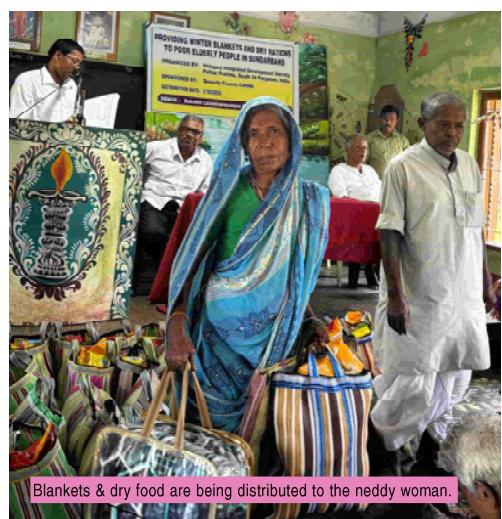

Community Health Development Programs

- This year, our society organized multiple **Reproductive and Child Health (RCH)** awareness programs across Chintamonipur village.
- Sessions focused on maternal health, child nutrition, immunization, and family planning.
- Over 120 women and adolescent girls participated in interactive awareness camps.
- Community stakeholders' meetings were conducted to strengthen collaboration with health workers and local leaders.
- Health announcements were made through community gatherings and loudspeaker campaigns.
- A special focus was given to teenage menstrual health and Hygiene education in schools.
- Feedback from beneficiaries was collected to improve future program design.
- These initiatives have contributed to increased awareness, better health-seeking behavior, and stronger community participation in health development.

Project Name: Providing winter blanket and dry rations to poor elderly people of Sundarbans.

There are numerous elderly people who exposed to various life problems living in total Sundarbans areas. These older persons are vulnerable to poverty, food insecurity, limited access to social and health services. The impact of the COVID-19 pandemic combined with acute economic stress has resulted in changed family structures in Sundarbans in

West Bengal. Majority percent of elderly people are helpless. In addition to this, old age people are struggling with different forms of problems such as age related diseases, food shortage, lack of day and night cloths and hopelessness. Therefore, they need proper care and support of others in every direction of their life.

About 90% people in Sundarbans are dependable on Agriculture, fishing, wood cutting, daily labor, etc. Periodical cyclones for last 10 years followed by COVID pandemic and long lockdown have made people much more susceptible to hazard with the evil

impact. 50 poor elderly people have been selected in a meeting in presence of the stakeholders of four villages. These 50 people are the beneficiaries of this project. The beneficiaries belong to four villages like Dakshin Laxminarayanpur, Madhab Nagar, Dakshin Shibganj and Kishori Nagar villages

under Pathar Pratima block in Sundarbans under South 24 Parganas district in West Bengal State in India. The beneficiaries are provided one winter blanket and dry ration (Rice-4 kg, Musur Dal- 1 kg, Soya been- 1 kg, Mustard oil- 1 litre and Biscuits-400 grms). The project is funded by Benevity Causes, Canada.

Blanket & dry food distribution camp

Secretary's speech at blanket & dry food distribution camp

Nutrition training for women to eliminate malnutrition in the Sundarbans:

Shibganj Integrated Development Society (SIDS) is engaged in Health and Nutrition and based on our engagement it

Certificate is being given to participant in a 2 days nutrition training

has been found that there is inadequate and improper food practices in Sundarbans areas along with poor hygiene which has led to 80% anemia among women and almost 50% malnutrition condition in children. Some factors that has been found are as follows: Traditional practices related to pregnancy and childbirth.

Local food consumption pattern which mostly comprises of carbohydrates and very little protein vitamin/mineral content food. Due to

various reasons pregnant women are not following all the guidelines of AWC. Service delivery (Institutional Delivery & JSY) system is not functioning in a desired manner. Malnutrition is also cause acute problems, like hypoglycemia (low blood sugar). This condition can cause lethargy, limpness, seizures, and loss of consciousness. Children are particularly at risk

and can become hypoglycemic after 4 to 6 hours without food. Some toddlers have nutritional problems that can have immediate and long-term effects on their health, growth and development.

Our organization believes that training of women in the Sundarbans is an effective way to eliminate malnutrition. So, our organization organized two day Nutrition training for women who have leadership qualities. 34 women from 8

villages like Madhab Nagar, Dakshin Laxminarayanpur, Baradapur, Paschim Dwarokapur, Dakshin Shibganj, Mahendranagar and Durgagovindapur participated in the training. Everyone was provided with tea, Tiffin and lunch every day. Training materials were given to everyone. At the end of the training, each participant was given a certificate. The training held on 16/03/2025 and 17/03/2025 at Hotel Paradise, Pathar Pratima. Dr. Chaitali Mondal, Ph. D. in Nutrition, Fellowship in Medical Cosmology (Skin and Hair), Senior Consultant Dietician, Weight Management, Diabetic Management, Sports Nutrition was present as a trainer in the two-days training.

Certificate is being given to participant in a 2 days nutrition training

2 days nutrition training

Participants receive certificates after 2 days

CASE STUDY

Goat rearing can be a profitable and empowering venture for unemployed women in the Sundarbans. It requires low initial investment, has low management needs, and offers a good income potential, especially with the high demand for goat meat and milk. Furthermore, goat rearing can be easily integrated with other livelihood activities. Moreover, Animal husbandry is a significant contributor in rural economy and plays vital role in socio-economic status of the rural people as a mean of employment provider, especially to women folk.

Shibganj Integrated Development Society (SIDS) supplied 3 female goats to each women beneficiary and 8 beneficiaries were selected in the year 2023-24. The rearing rooms were built and fodder and medicine for goats were distributed for six months. Two days training program were organized for the beneficiaries. The staff always visited the beneficiary's houses and provided the required assistance. The veterinary Surgeon occasionally visited the beneficiary's houses and he used to check the health of goats.

Smt. Anuradha Mondal w/o Poritosh is an inhabitant of Bhagbatpur village in South 24 Parganas district. She was the beneficiary of the project which was implemented by the SIDS in the year 2023-24. She received 3 female goats and fodder, medicine and rearing room. She participated in the training organized by SIDS during 2 days. She and her family devoted themselves to raising goats. After a year and a half, the number of goats increased to 12. She sold four male goats for 24000.00 rupees in 1 year and 6 months. The number of her goats will increase every year. It is expected to earn at least 48000.00 rupees every year by selling goats. Her husband and other family members all stood by her in this endeavor. She is motivating other women of Self Help groups to adopt this technology. Everyone in my family is happy about it and others are feeling encouraged.

AFTER EXTENSIVE EVALUATION FOR ACCOUNTABILITY AND
TRANSPARENCY, THIS CERTIFICATE IS AWARDED TO
